

Probability plot showing Probability (Y-axis, 0.00 to 1.00) versus lengthScale (X-axis, 3, 5, 8, 12, 20). The plot displays five distinct probability distributions for different lengthScale values. The distributions for lengthScale 3, 5, 8, and 12 are very narrow and peaked at 1.00. The distribution for lengthScale 20 is broader, peaking at approximately 0.95.
