

Probability

lengthScale

This plot displays the probability distribution for the 'lengthScale' parameter, with values at 3, 5, 8, 12, and 20. The y-axis, labeled 'Probability', ranges from 0.00 to 1.00. For the first four values (3, 5, 8, 12), the distributions are extremely narrow, appearing as sharp spikes at their respective values. The distribution for the value 20 is significantly broader, shown as a purple-filled area, indicating a wider range of probable values.
