

Probability

lengthScale

This plot shows the probability distribution for the 'lengthScale' parameter. The y-axis is 'Probability' (0.00 to 1.00) and the x-axis is 'lengthScale' with values 3, 5, 8, 12, and 20. The distributions for 3, 5, 8, and 12 are extremely narrow, appearing as vertical spikes at their respective values. The distribution for 20 is much wider, spanning from approximately 15 to 25, with a peak probability of 1.0.
