

Probability plot showing Probability (Y-axis, 0.00 to 1.00) versus lengthScale (X-axis, 3, 5, 8, 12, 20). The plot displays five distinct distributions. For lengthScale values 3, 5, 8, and 12, the distributions are extremely narrow, appearing as vertical spikes at their respective values. For lengthScale 20, the distribution is much wider, shown as a purple shaded area, and is centered around 20.
